  Display system name in user end bottom page

Company Information

- Set Title or company name
- Description of your company
- Company manager contact name
- Company manager email
- Company URL
- Company Text 1-2-3-4 (Those 4 fields can be useful for custom player widget)
- Upload Help Files: pdf help for Admin end – User end and login page

Backups

- Generate a full back up of the system

WARNING:

Depending on security level of your hosting, <u>creating backup may generate alarms.</u>
**Before generating any backup, please advise your IT security manager**

Users

- Create or modify users
- First Name / Last Name
- Username
- Email (for login)
- Contact Phone number
- Password

Configurate the application – Steps to follow

1. Create Audio Pid's
2. Create Subtitles Pid's
3. Create channels – Assign Pid's
4. Create player's list
5. Create Locations – Assign players and channels

Audio PID's

☐ ⋮ English

☐ nal

**Options**: View Pid / Edit PID / Delete PID

Setup Audio Pid's for your channels .

- Name of the PID
- Audio Level (1 = max ; 0 = mute)
- Video File Audio PID
- Streaming Audio PID

Note that pid's for streaming or files mp4 are different

In some situations, channels may have same audio Pid's for different audio track
special display (with pid code) will be displayed when you assign pid to channel
Is no restrictions on Pid's name or Pid's codes

Subtitles PID's

☐ ⋮ English

☐ nal

Options: View Pid / Edit PID / Delete PID

Setup Subtitles Pid's for your channels .

- Name of the PID
- Video File Subtitle PID
- Streaming Subtitle PID
- Format (not use in actual version)

To find correct Audio Pid's or subtitles Pid's for your channels, please :

Ask your local IT manager or check the link with:

- Elementi X: www.spinetix.com
- Media Info: https://mediaarea.net
- VLC mediaplayer
- Any software who can displays correct pid's code

Channels

**Options:** Duplicate channel / View details / Edit / Delete

Setup channel information's

- Channel Name (will be displayed on user end)
- Allowed media (upon system setting)
- Media URL (Streaming link)
- Assign Audio Pid's
- Assign Subtitles Pid's
- Upload channel image (300/ 300 pxl)
- Format (not use in actual version)
- Update

After mappings of PID's and update, you can assign order and default value for each Audio PID and assign order for subtitles. This sort will be default sorting for this channel

In some situations, channels may have same audio Pid's for different audio track
special display (with pid code) will be displayed when you assign pid to channel
Is no restrictions on Pid's name or Pid's codes
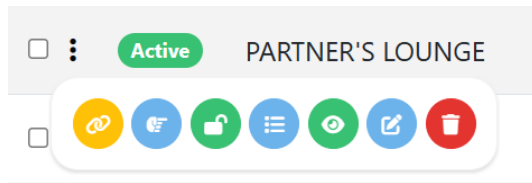

Players

Options: Player status / View details / Edit / Delete

Setup Player information's

- Player Name
- Service Serial number of your Spinetix HMP
- Type of your HMP player
- Status of the player

IMPORTANT

- For HMP 350, serial number and service serial number are the same
- For HMP 400, the system need the service serial number and not the serial number
  Find the service serial number of your HMP400 player : Player identification
- The HMP serial number is mandatory as only players who have the serial matching the serial setup will display the channels.
- In case of mismatching, one special page will be displayed on screen, asking the location manager to check with the IT team

Options:

- URL link for user end (do not use in player widget)
- access user end
- status (Set location active or stand by)
- Json result for this room only
- View all location details (Png download of location **Qr codes** access and Table sticker / image, etc)
- Edit Location
- Delete Location

Setup Location information's

- Location Name
- Code : Login code to access location on user end
- Situation : Situation of the room in building / Zone , etc…
- Type of location:
    - Lounge: one lounge can be setup with many players
    - Office: one office can be setup with only ONE player
      (User end layout depend on choice)
- Autologin:
    - YES: No code will be asked on user end to access channels manager
    - NO: Login code will be asked on user end to access channels manager
- Autologout Time : Set the automatic logout time in user end (in minutes)
- Channels : Assign desired channels to this location
- Players : Assign desired players to this location
  (1 player only for office – many players for lounges)
  Drop down list will show you only available non-mapped players
- Office image :   Upload image of your location (1920/1080)
- Office Status: Set status of your location (Stand by or active)

  **After Assigning channels and image upload, please "UPDATE" and come back
  on page for final setup as**:

- Assign order and default value for each Channel
- Set players on location image:

Press "SET Players Positions" , you will be redirect to one new page

  If your location is set as Autologin: NO, system ask you for the code

  Once login, simply drag players on the most suitable location on the image
  (At the first setup, the players are all on the same position, just drag and drop from this position)

  Clicking a player will display his name to help you (this info is hide in user end)

  When done, simply click on the BACK button to come back on admin side and apply "UPDATE" again

Export

- JSON of all Locations (URL link for use in player widget)
- Export Current page in Excel format
- Export All records in Excel format

Admin bottom left page pictos

- Admin help page
- User info – Edit profil – Logout
- Dashboard
- Urbanit Open Ticketing support

  To see Help for user end, please log in user end and click info

Widget for HMP's Media players

One special dedicated widget is provided with each instance of streamiX in a 7Z file.
This widget or (project) as to be upload and scheduled into your players with ARYA.

IMPORTANT

- If your widget is scheduled into one player but not configured in StreamiX, the error page will be
  display at each invocation of the project, during the display time done in ARYA

- If your widget is NOT scheduled into one player in Arya , but configurated in StreamiX,
  User end will have always access to the streamix location user end, but no effect will be active on screen.

  Any modification applies to this widget by a non-agree JS-developer can cause fatal issue on functions.
  Please always ask streamiX support to customize your widget.

Specifications:
